Monomyth Records latest band MARKETPLACE formed in Hartlepool during 2017. The 5 - piece cite influences such as Grouplove, MysteryJets, Hippo Campus and Talking Heads and have attracted wide acclaim during their time as a band. Their music has won fans such as Rianne Thompson from BBC Introducing on Radio Tees as well as press coverage from the likes of Dork Magazine and NARC.Magazine.

'Condensed Milk' has production and writing elements which manage to straddle the line between pop classic and indie anthem with ease. There's elements of Prefab Sprout with a touch of Kenickie and just a dash of Belle and Sebastian in the mix along with a wonderful understated but massively effective vocal performance.

All this is effortlessly packaged into a shimmering production which leaves us excited to see what this group of talented humans will do next!

'Condensed Milk' was written at the beginning of Evie's first year at uni during a time when she was homesick and the winter nights were drawing in. The track is about generally not being in the best place mentally at the time. The title is one of those that came about through not having a proper title and basically refers to the lyric in the chorus. Standard :)
